

## MOBILE LTE BROADBAND BACKUP

When your wireline broadband internet connection goes down, do all your employees stop working? Do your customers have to shop elsewhere? If your business relies on your wireline internet access to operate, you need to protect it with a wireless LTE internet backup.

Keep your business connected to your customers and vendors when your wired internet connection is lost with mobile broadband network failover protection from Verizon Wireless LTE. Comtex is now a Verizon Preferred Partner.

## MAINTENANCE Protect Your Investment

## WHY NON-HARDWARE MAINTENANCE?

Have telephone carrier issues, fax line or alarm line problems? Need minor program changes or over the phone tech support? Plans start at \$29 per month & cover most common industry issues. Depending on your needs the maintenance plan could save your company HUNDREDS! [CLICK HERE](#) to review our maintenance plans & call us TODAY to start saving!

## CAMERA TECHNOLOGY'S RAPID GROWTH

Ever seen a grainy, hard to see image surveillance video? New camera technology has created Intensifier IP & HD-TVI. No need to worry about losing visibility & images in variable lighting conditions. These cameras amplify existing light with no limitations in distance. All objects display in perfect clarity with minimum light. These IP cameras can also be accessed remotely, anytime-anywhere with an internet connection via smartphone, tablet or PC.

## PROFITABLE MOBILITY

A relatively new feature for telephone systems means you can select how you would like your office calls delivered to your desk, mobile phone or both right from an app running on your mobile device or possibly from your PC. This feature also allows you to place calls from your mobile phone but the outbound caller ID looks like you are in the office thereby keeping your cell phone # private. Using this technology to stay in touch with clients and prospects makes you more accessible, efficient and profitable. Simply contact your account manager for the app name to download and instructions to activate the mobility features.

## Ty's Tech Tips!

## CALL PARKING

Many clients today do not have the traditional analog phone services as we have had the past 30 years, but rather have VOIP services, SIP or possibly a PRI. All three services work differently than the standard Line 1, Line 2, Line 3. Transferring and putting calls on HOLD is quite different. So, a feature was developed to help with this issue known as CALL PARK and CALL PARK PICKUP. There are various types of CALL PARK but most of our systems offer a system wide PARK zone which we call PARK 1, or PARK 2, etc... Once a call is placed on hold using these keys, you can simply pick up the call anywhere you see the key flashing for PARK 1 (displays caller ID while on hold), by pressing the CALL PARK key where the call was parked. In some cases, press CALL PARK PICK UP and then the appropriate PARK key. Learning exactly how the CALL PARK feature & function works on your system will make life as easy as the "old days."

## INTERNET TOO SLOW?

Comtex is selling internet services for the lowest prices & fastest speeds EVER! While download speeds of 60Mbps may be sufficient for many, the UPLOAD speed of only 3 or 4 Mbps (standard with 60 Mbps) with that package is woefully SLOW. And, with CLOUD computing becoming more and more common and with SLOW upload speeds of 3 Megabytes (equal to 2 old fashioned T1s) and 4 Mb many businesses are experiencing bottlenecks in internet/computer performance. Often times the FIBER solution is too expensive. See our affordable prices below!

240/15 Mbps \$ 149 per month

240 Mbps download with 15 Mbps UPLOAD

300/20 Mbps \$199 per month

300 Mbps download with 20 Mbps UPLOAD
