### GOING RESIDENTIAL!

#### Expanding to Home Surveillance Camera Systems

Home surveillance camera systems from Comtex Technologies ensure your family & property are always safe. Our home surveillance cameras include live video monitoring via the internet from any web-connected device. 24-Hour/365 day continuous, hassle-free recording. Day & night image viewing with infrared camera technology. Digital technology with time & date stamp allowing recording to be admissible evidence in court. Home video surveillance is no longer just for the wealthy. The once expensive equipment has become more cost effective allowing homeowners of all budgets the ability to have peace of mind whether you are at or away from home.

## INDUSTRY SPOTLIGHT

### Phone Systems Today

Comtex offers three telephone system product lines, ICON, TOSHIBA, and ALCATEL LUCENT. All have VOIP options as well as the traditional or legacy DIGITAL telephone solutions. SO -- What exactly is VOIP? The acronym stands for VOICE (V) packets that are audio files in a digital format of zeroes and ones OVER (O) or transmitted by INTERNET PROTOCOL (IP) which is a computer / data format or standard. IT professionals will like all they hear about VOIP telephone systems because it all makes sense in "their world." BUT, in reality it is only a different TYPE of telephone (audio) communications method for the computer industry versus traditional digital telephonesystems, which use strange (to them) words and acronyms like KSU, PBX, MDF, IDF, physical ports, logical ports, PRI, CO lines, all connected with (even more amazing to them) only one pair of wires. Surely 4 pairs or 8 wires per phone are better than one pair....right?

Digital telephones and IP telephones have the same features available. The MAIN advantage to VOIP is for remote workers, or when connecting multiple offices via the INTERNET - hence you must use voice over INTERNET protocol. This protocol uses IT infrastructure and software and

## ONE STOP SHOP

### For All Your Connection Needs

DID YOU KNOW? We do more than sell and install telephone system hardware? We sell Security Cameras, Access Control, Low Voltage Wiring & can resell almost every telephone carrier in the state. Have trouble with phones? No Problem! Want a camera for your front desk? We can handle it! Want to save money on Internet or Local.Long Distance? We can help with that too! Why go through the hassle of having 4 different vendors when you can call ONE company that can handle it all?

### TY'S TECH TIPS!

### Prevention is Better Than a Cure

MAINTAIN YOUR  
HOOK UP

Call us today & let's  
discuss your options!

*Industry Spotlight continued...your computer wiring network (or another duplicate network for the phones) to connect devices (telephones). So, each time your computer network goes down, so does your phone. But within the 4 walls for your stand alone building there is no reason to buy a VOIP system when you have a separate stand-alone DIGITAL wiring network in place. Let Comtex help you get The Hook Up and SAVE YOUR BUSINESS some BIG \$\$\$\$!*

### Camera TIP

LIVE Video Feeds - If you were to take a walk around our office you would find our cameras' LIVE feed broadcast on no less than 5 HDTVs spread around the building. These video feeds are not streaming over our WiFi or the internet but simply done with multiple feeds via splitters and amplifiers. Live feeds have NO network delay or latency observed over internet feeds. This allows for most all employees to be aware of the "situation" anywhere around the building or outside our offices. We have used this system to quickly find employees without paging, catch potential thieves from seeing us as "blind" outside the building during the day, cut down on trespassing through our parking lot as well as illegal parking for multiple offenders, and allows for brief 1 or 2 minute notice a visitor is approaching the building and is in the parking lot.

Call us for a FREE proposal to install more HDTVs and create your internal LIVE feed system or more information about the FREE apps.
